Timeline

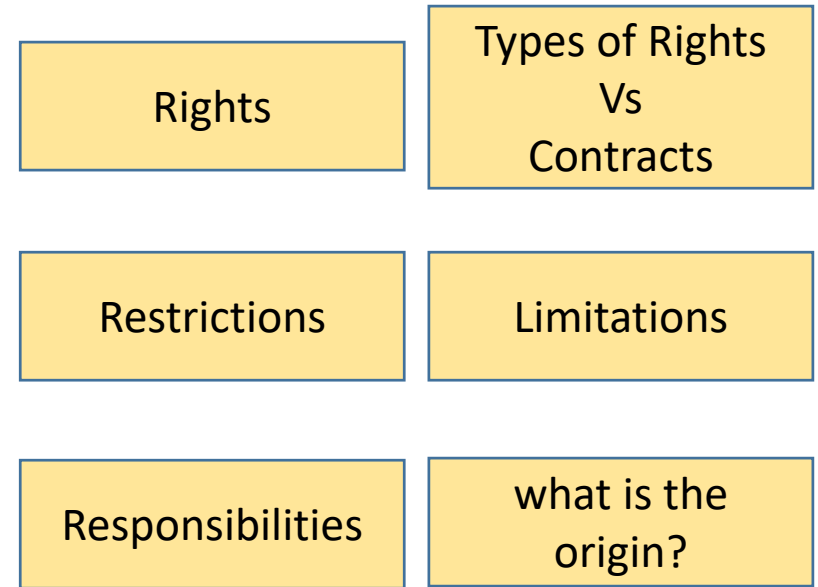

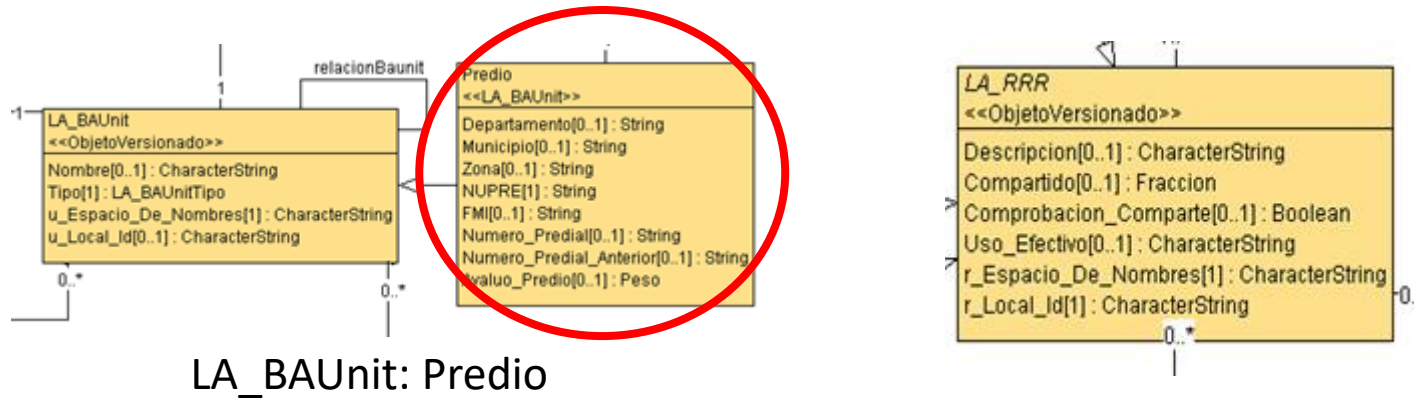

Legal independence

- The administration of each legal spatial object is unique and supported by its own legal framework which requires that each theme can be managed in isolation to the legal needs of the others.
- This necessary legal and/or institutional independence requires that each institution assumes the responsibility for its own data and an adequate way to guarantee interoperability.

Modules of Colombian LADM profile

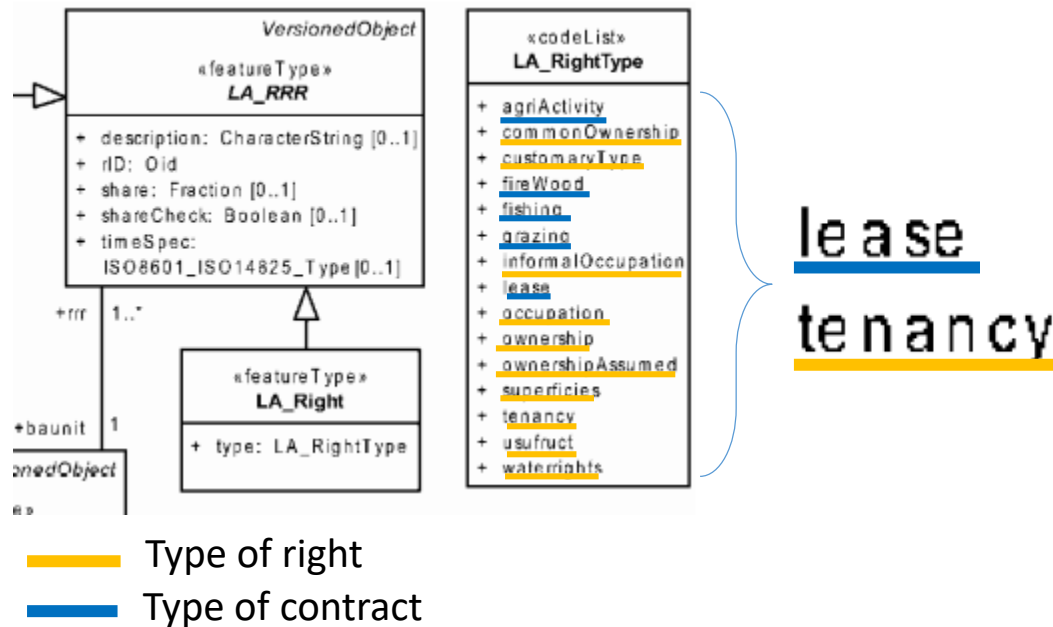

Cadaster-registry module

Colombian ISO 19152 profile - suggestions

Right: LA_RightType

Relations

- **Responsibility** is directly associated with exactly one (1) party and exactly one (1) basic administrative unit (BAUnit)
- **Restrictions**, these will be associated with zero or one (0..1) party, and exactly one BAUnit
- In practical life it is found that a BAUnit does not always have an associated responsibility or a restriction

Colombian ISO 19152 profile - suggestions

How to spatially represent different land rights in one BAUnit?

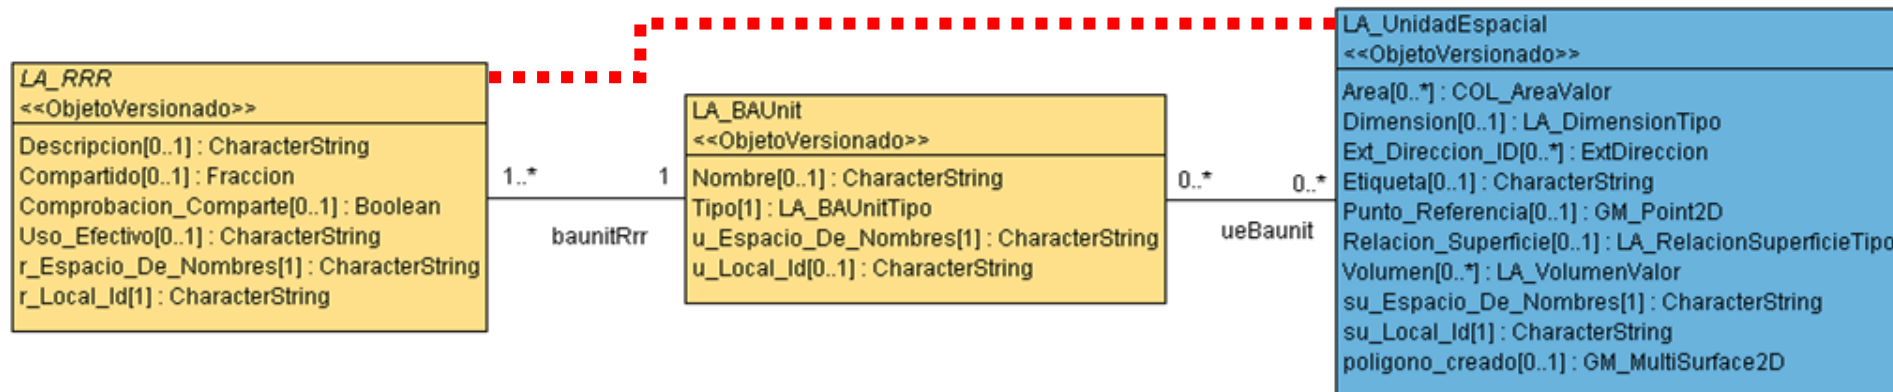

ownership

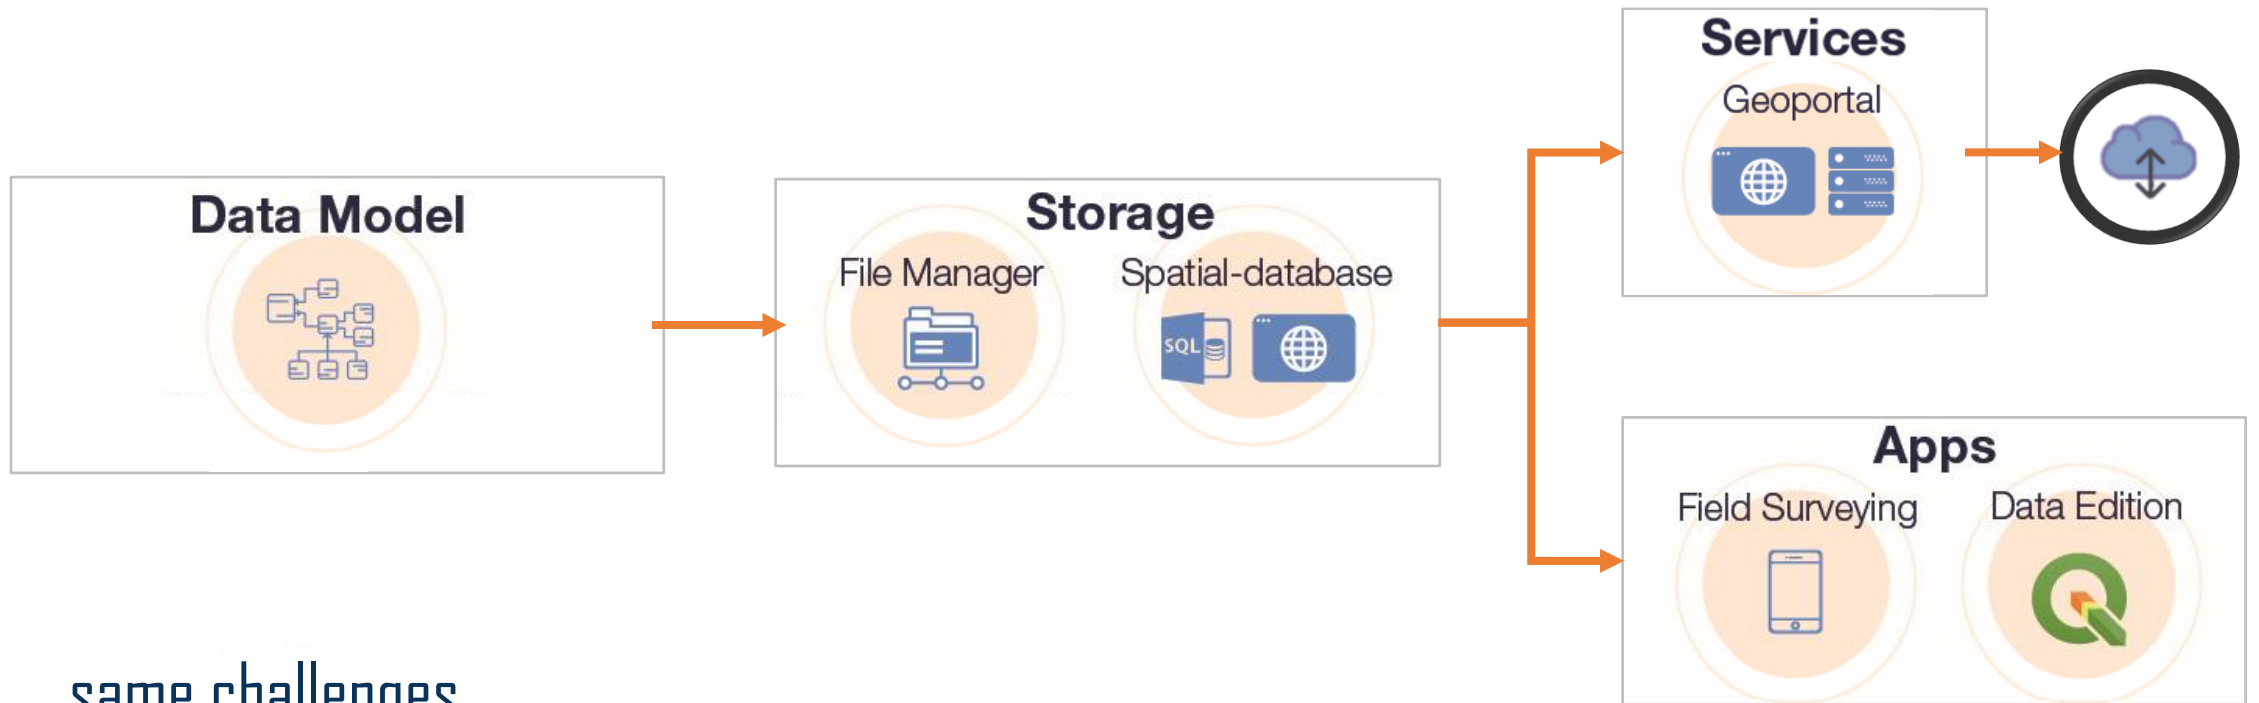

Tenancy

Informal Occupation

→ Eventually with additional relationship RR to spatial unit

LADM Implementation same industry requirements

...same challenges

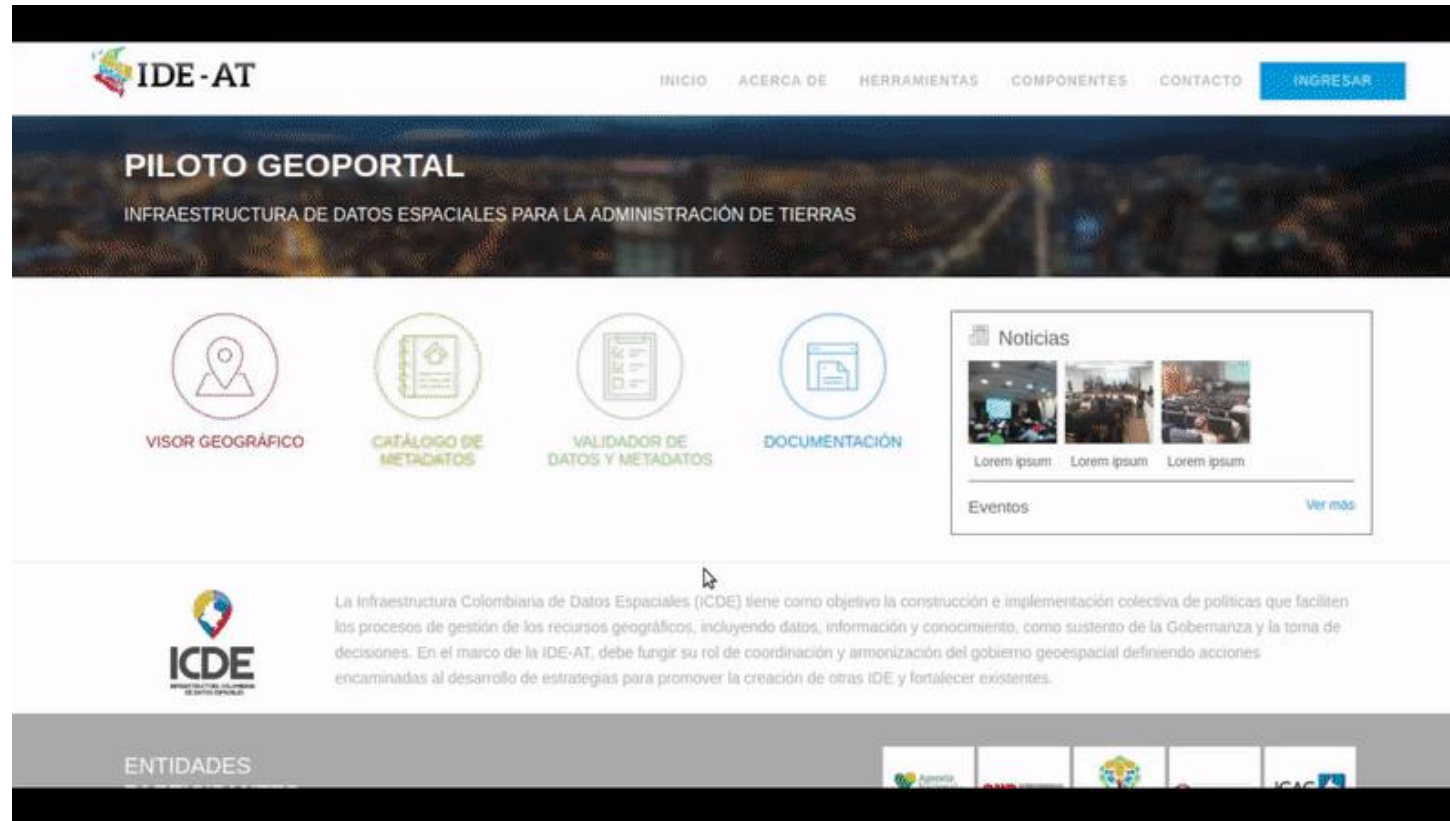

LADM Implementation using INTERLIS

Data model described in **INTERLIS** helps to create (semi-automatically) a fully Integrated Data Management System (**MDA** principle)

*All based on FOSS

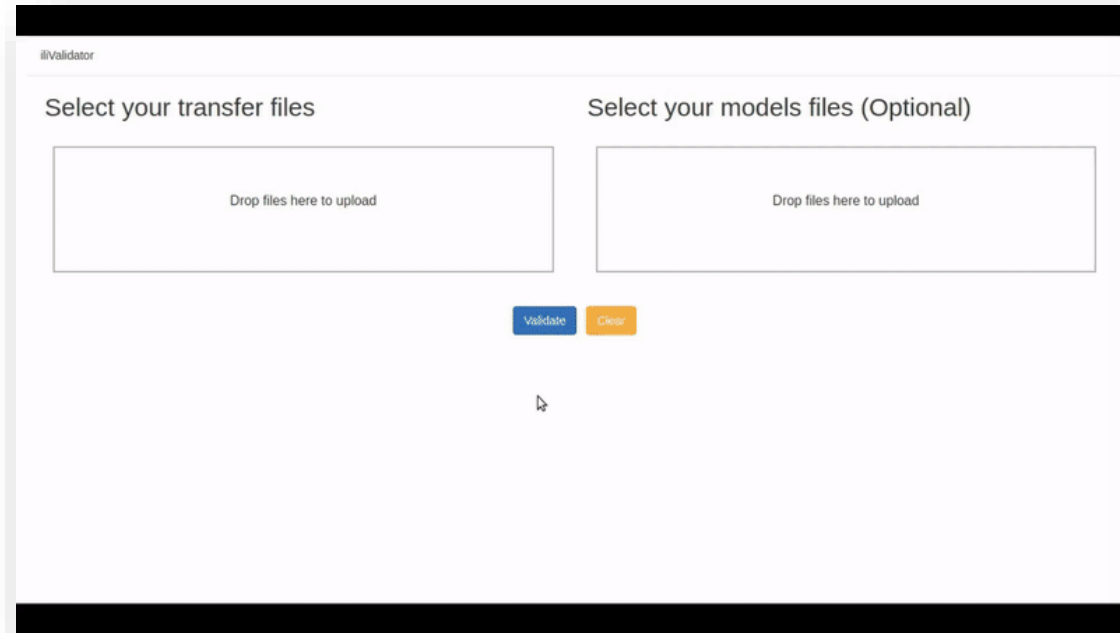

Web Portal (security, validation, data exchange, reports)

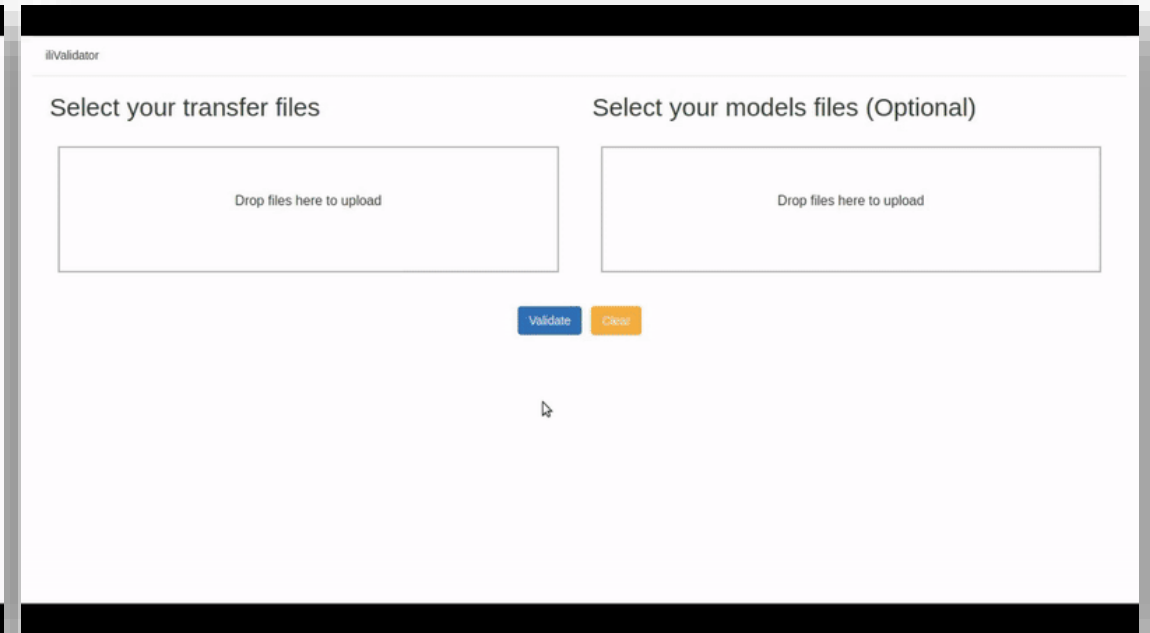

Web Viewer

- Centralized Access point to Land Administration Info
- Bringing together all concerned institutions on one platform.
- Creates efficiency and transparency

Data Validation Service

On Error

On Success

Summary

-  The introduced “**Modularity**” of the LADM-COL helped to meet the required **legal independence**, an institutional reality in Colombia.
-  The LADM-COL Cadaster-Registry model finds a particularity in the class "Publicity" that goes **beyond the RRR**, defining a new type of relationship between parties and basic administrative units.
-  The use of the object-oriented **INTERLIS** language facilitates the implementation of the legal independence principle. The ecosystem of reliable INTERLIS tools **now available**, facilitates implementation of **any LADM** country profile.
-  The developed **data validation service** increases productivity by automatically and massively checking data against a given model as well as the defined validation rules.
-  The developed Data Reception System is easily deployable by administrations with limited resources (e.g. Municipalities) and can be considered as a **generic information infrastructure of Land Administration**, with LADM as the underlying model.
